

*Dear Future Generations:*

*The Intro: Good day reader, this letter is very dominant and important so kindly read to the end. The purpose of this message is to fulfill the destiny of saving the earth and apologising to you new generations for all the awful things we have left behind. The letter was created in 2021 and should be released around 2069.*

*The Apology: On behalf of the generation Z we would like to apologize for what we have done. Covid 19, ocean filled with plastic garbage, toxic waters, polluted air, racism, and all those grim occurrences. May you please forgive us and continue the life we have been given.*

*The Problem: Every year 8 million tons of plastic is littered, that is equivalent to 57,000 blue whales. It's too late to imagine this since it's already happening but those 8 million tons of plastic are probably floating around in the sea as we speak, it will pollute the waters we drink or swim in and it will kill the sea, air and land mammals we eat. There is also a chance it will end up in the food we consume today. They say no humans alive will ever see a clean river, lake, and ocean. But I believe we can change that.*

*The Solution: There is garbage exactly everywhere you look, so to change that pick it up and dump it in the trash. If you are holding rubbish and there are no bins around, hold it. It's not that hard, if you have no pockets, put it in your car until you find a bin. Whether you're swimming in the beach or lake and spot rubbish, pick it up. Unless you like eating garbage in your filet o'fish then be an arrogant human and stand there.*

*The Solution 2.0: Lastly, use less plastic or use plastic responsibly. If you have a plastic bag then keep it for every time you go grocery shopping, and if it rips then use that to make something creative. Like a wallet or skipping rope, don't mind searching that up. If you have a plastic bottle then do the same as the plastic bag, create and reuse. You can make a bird feeder or piggy bank.*

*The Conclusion: This letter has now gone to an end. But not to worry because I'm probably still alive. So, take the advice and tips I gave and use it to save the earth from dying. Good luck and God bless.*

*Sincerely Mark Mareko*
